1. The Simplest Example

Loading the `tgschola` package in the document preamble sets TEX Gyre Schola as the main serif typeface, i.e., the typeface associated with the `\rmfamily` command. This means it will be used for composing the main text of the document.

For changing `\sffamily` or `\ttfamily`, see the demos of TEX Gyre Heros and TEX Gyre Cursor.

When typesetting in Polish with classic TEX and pdfLATEX, activating font encoding T1, QX, or OT4 is necessary (preferably using the `polski` package). For example:

```
\usepackage{tgschola}
\usepackage[T1]{polski}
```

When using Unicode versions (XeLATEX or luaLATEX), the encoding providing access to all glyphs of the font is applied automatically; the following preamble suffices:

```
\usepackage{tgschola}
\usepackage{polski}
```

Here is the TEX Gyre Schola typeface. Zielone kalafiory Jagiełły **nie *gryzmolizują*** namiętnej śpiewaczki **chóru BOSTOŃSKIEGO** in a manner exceeding *imagination* of the distribution of price-competition impregnates in a post-industrial society. To *DZIWNE*!

Using LATEX commands, many symbols can be accessed, for example: © 1058 •№ ¼µm

2. Accessing Other TEX Gyre Typefaces

If you need to mix multiple typefaces, you can activate them with the following commands:

```
and get {\fontfamily{qag}\selectfont
a fragment typeset in \TeX\ Gyre Adventor}
```

and get a fragment typeset in TEX Gyre Adventor with a different main font.

Here are all TEX Gyre typefaces:

code	typeface name	similar to
qag	TEX Gyre Adventor	Avant Garde Gothic
qbk	TEX Gyre Bonum	Bookman
qzc	*TEX Gyre Chorus*	Zapf Chancery
qcr	TEX Gyre Cursor	Courier
qhv	TEX Gyre Heros	Helvetica
qhvc	TEX Gyre Heros Condensed	
qpl	TEX Gyre Pagella	Palatino
qcs	TEX Gyre Schola	Century Schoolbook
qtm	TEX Gyre Termes	Times New Roman
